Grammar is the academic discipline that deals with the concepts and rules that regulate language. Grammar is the fundamental structure of language that ensures proper organisation and coherence of words, phrases, clauses, and sentences. This, in turn, enhances understanding of the language being used.

Thus, grammar is the central element of language. Proficiency in grammar is essential for proficient communication in both written and spoken forms of language. Language is a prerequisite for writing, which entails the use of written words, whereas speaking entails the utilisation of verbal communication. Grammar is crucial and vital in both written and spoken communication.

The use of language structured according to grammatical rules is suitable in scientific situations and formal environments. Therefore, it is essential to get expertise in English grammar while learning the English language. The author has a strong need to create a book called 'Basic English 1' that explores the topic of English grammar.
